

Project Documentation

1. Project Description

This project is a Personal Finance Tracker built in C# using the .NET MAUI framework. It helps users track their monthly income and expenses, allowing them to add and manage individual expense records.

Key components include:

- Models/: Contains Expense and MonthlyIncome classes to represent financial data.
- Services/ExpenseDatabase.cs: Handles local database operations for storing expenses.
- MainPage.xaml and AddExpense.xaml: Provide the user interface for viewing and adding expenses.
- MauiProgram.cs: Configures services and application startup.
- Resources/ and Platforms/: Contain resources and platform-specific settings.

2. Technologies Used

- C#
- .NET MAUI (cross-platform UI framework)
- SQLite or local database (as suggested by ExpenseDatabase.cs)
- XAML for UI design
- .NET SDK
- Standard .NET project structure with solution file (PrijmyAVydavky.sln)

3. Instructions for Running

Prerequisites:

- .NET SDK installed (e.g., .NET 6 or later, ideally .NET 7 for MAUI)
- Visual Studio 2022 or later with .NET MAUI workload

Steps:

1. Clone or extract the project to your local machine.
2. Open the solution file (PrijmyAVydavky.sln) in Visual Studio.
3. Select the target platform (e.g., Windows, Android Emulator).
4. Build the solution:
`dotnet build`
5. Run the application:
`dotnet run`
6. The application should now open, and you can start adding expenses and monthly income data.
