

Technical Documentation: E-commerce Project

1. Project Description

This project represents an e-commerce application developed in C#. Its purpose is to process orders, manage products and customers, and generate PDF files with order details. The project is divided into modules for controllers, models, services, and views.

2. Technologies Used

- Programming Language: C#
- ASP.NET Core: Web framework for application development
- Entity Framework Core: ORM for database management
- Razor Pages: Generating HTML views
- Docker: For container orchestration
- SMTP: For sending emails

3. Instructions for Running

1. Ensure that .NET SDK and Docker are installed.
2. Open the project in an IDE that supports C# (e.g., Visual Studio).
3. Check the `appsettings.json` file and adjust the database connection as needed.
4. Run the command `docker-compose up` to initialize required services.
5. In the IDE, run the application using `Program.cs`.
6. The application will be available at `http://localhost:<port>`.
